40. (a)

Given that $\log_2 a = 3$ and $\log_2 b = 5$.

Find the value of $\log_2(a^2b)$.

$$\log_2(a^2b) = 2\log_2 a + \log_2 b \quad (M1)$$

$$= 2(3) + 5 \quad (M1)$$

$$= 11 \quad \mathbf{A1}$$
